The Tibial Nail that your surgeons need!

Distal Fixation

3x Rotational Stability

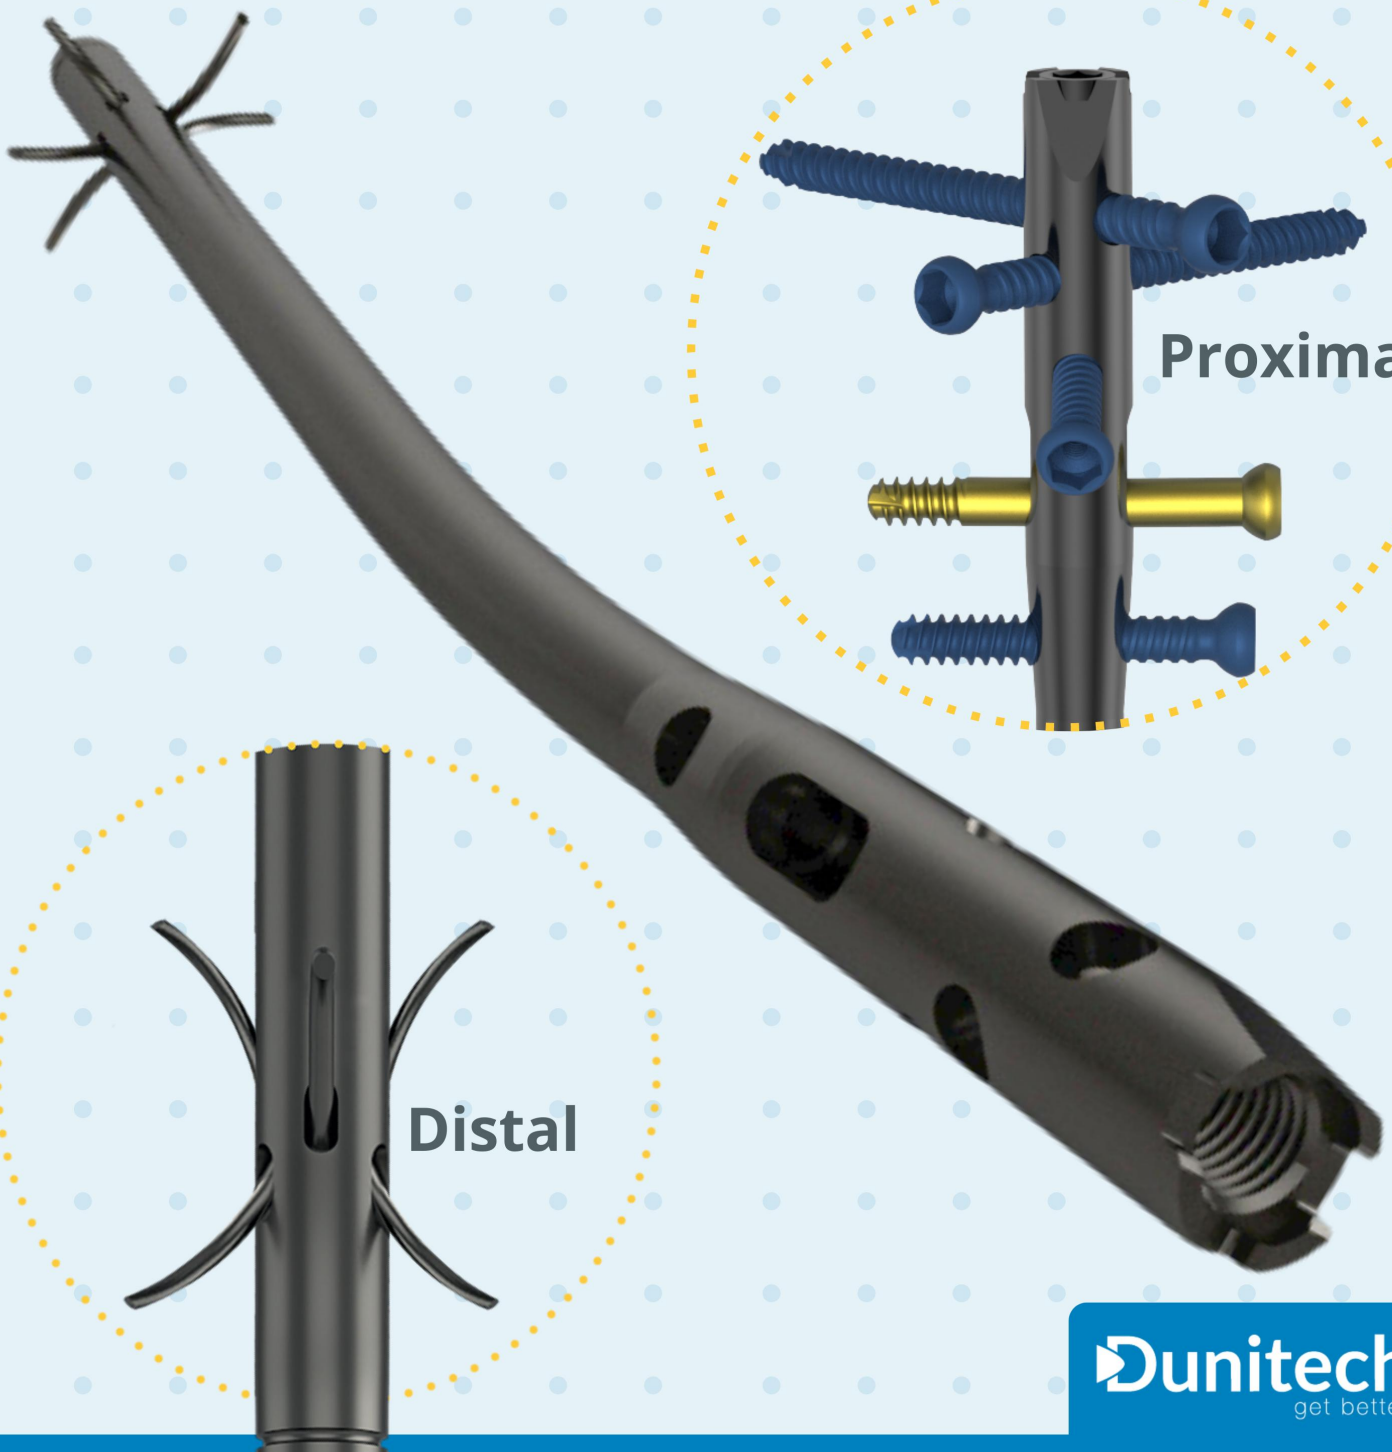

The Claws are made from titanium, and mechanically deploy from within the nail and lag screw.

Claws penetrate through the cancellous bone, and anchor the nails and lag screw in the cortical bone.

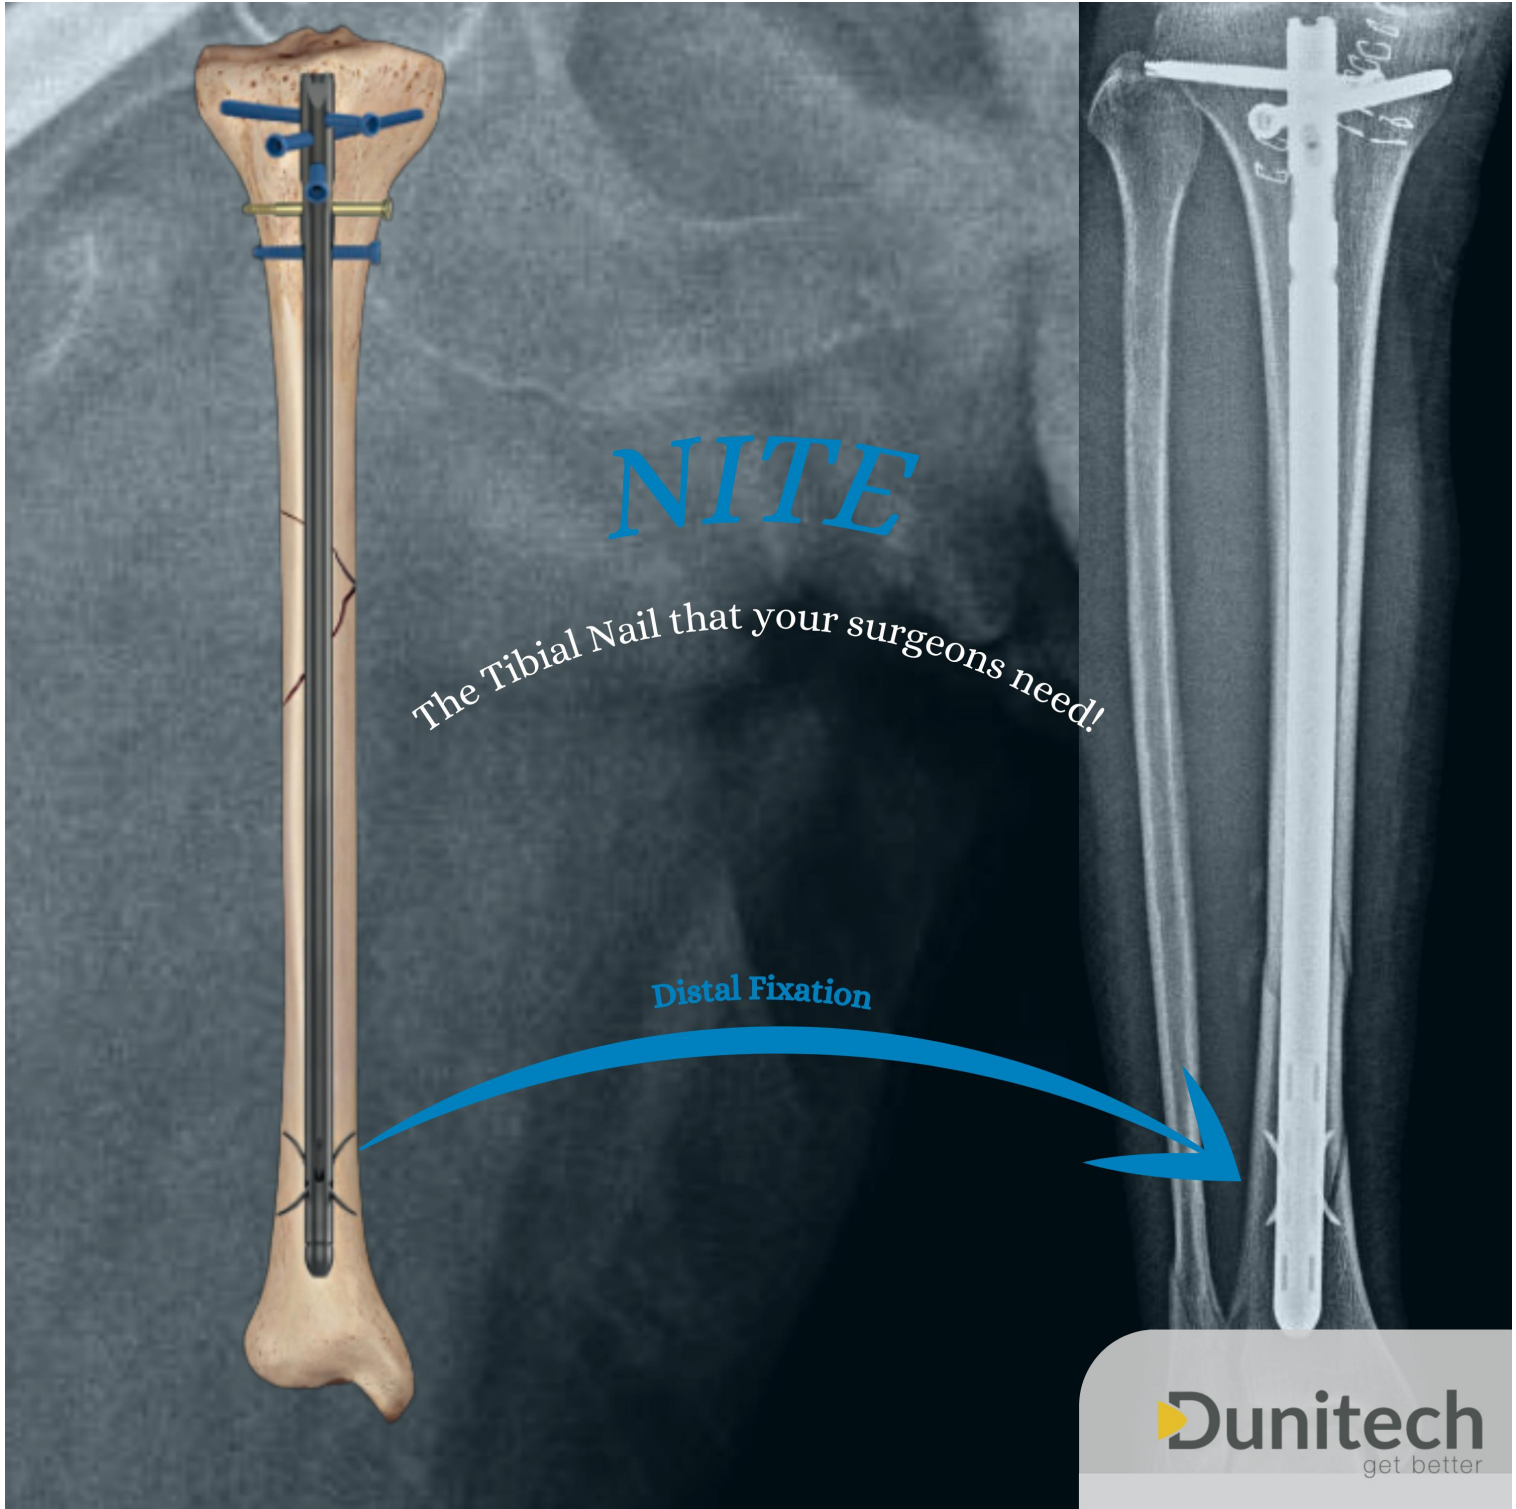

INDICATIONS

- ✓ Intertrochanteric fractures
- ✓ Stable and unstable pertrochanteric fractures
- ✓ High subtrochanteric fractures without shaft extension. Low subtrochanteric fractures (Neon Long Nails only)
- ✓ Osteoporotic fractures
- ✓ Pathologic / impending pathologic fractures
- ✓ Malunions / nonunions
